Tristan Hoellinger

Master's degrees in Mathematics x Hybrid AI
PhD candidate in Statistical Cosmology

Paris, France

Academic Employment

October 2023 – September 2026 **Ph.D. Candidate**, *Institut d'Astrophysique de Paris (CNRS — Sorbonne Université)*, Paris, France
Topic: Cosmological physics with Euclid non-standard cosmic web probes.
International collaborations (full member): Aquila Consortium (2023-), Euclid consortium (2023-)
Advisors: Florent Leclercq (CR CNRS/INSU & INS2I) and Guilhem Lavaux (DR CNRS INSU; HDR).

Academic interests

- Numerical cosmology (forward modelling), dark energy, field-based cosmological inference,
- Bayesian methods, implicit likelihood inference, information theory, robust AI,
- Optimisation, stochastic optimisation, optimal control.

Academic Service

2023 – 2024 **Organiser of the weekly Friday's pre-seminar meetings at IAP**
Weekly informal meeting between PhD students and invited external seminar speakers at the IAP.

2024 **Co-animated a workshop at the Fête de la Science 2024**, *Oct 13th, 2024*
Co-animated the workshop "Histoire de l'Univers et du fond diffus cosmologique" for 11+ y.o. children.

2023 **Member of the LOC for the Aquila 2024 autumn meeting**, *Oct 21st – Oct 25th, 2024*
Bi-annual meeting of the Aquila consortium, IAP, Paris.

2023 **Member of the IAP LOC for the ML-IAP/CCA conference**, *Nov 27th — Dec 1st, 2023*
Conference on Machine Learning in astronomical surveys, IAP, Paris / Flatiron institute, New York.

Teaching

2024 – 2025 **Teaching assistant in Mathematics**, *3rd year Bachelor in Mathematics*, Sorbonne Université
PDEs (38 hours), unconstrained and constrained optimisation (38 hours).

2023 – 2024 **Teaching assistant in Mathematics**, *3rd year Bachelor in Engineering*, Sorbonne Université
Fourier analysis and distribution theory (32 hours), ODEs (18 hours), numerical methods (14 hours).

Languages

English Fluent – Cambridge Linguaskill Business: C1+ (highest score, 180+/180).
French Native.

Talks

Oct 17th 2024 **X Meeting on Fundamental Cosmology**, *Universidad de Sevilla*, Sevilla, Spain
Lightening blackbox models in field-based cosmological inferences, *15 minutes talk*.

June 7th 2024 **Seminar PhD students**, *IAP*, Paris, France
Lightening blackbox models, *40 minutes talk*.

March 29th 2024 **PhD day**, Institut d'Astrophysique de Paris
Novel methods for implicit likelihood inference in cosmology, *10 minutes talk*.

Feb 28th 2024 **The Elbereth Conference 2024**, *by & for PhD students*, IAP, Paris
Implicit likelihood inference in cosmology while checking for survey systematics, *12 minutes talk*.

Jan 25th 2024 **Euclid France 12th Symposium**, *IP2I*, Lyon
Implicit likelihood inference in cosmology while checking for survey systematics, *12 minutes talk*.

Nov 6th 2023 **Action Dark Energy Colloquium 2023**, *LAPP*, Annecy
Implicit likelihood inference in cosmology while checking for survey systematics, *15 minutes talk*.

Publications

Submitted 2025 Diagnosing systematic effects using the inferred initial power spectrum, Hoellinger and Leclercq, submitted to A&A, arXiv e-prints Dec 2024, arXiv:2412.04443.

Submitted 2025 A Vorticity Confinement correction for the discontinuous Galerkin discretisation of the Navier-Stokes equations, Hoellinger, Manueco and Chapelier, submitted to IJNMHFF.

2023 Enhancer/gene relationships: need for more reliable genome-wide reference sets, Hoellinger et al., 2023, Front. Bioinform., Insights in Integrative Bioinformatics, PMC9999192

2020 Data-driven simulation for augmented surgery, Mendizabal et al. (incl. Hoellinger), 2020, Developments and Novel Approaches in Biomechanics and Metamaterials. Springer, hal-02538101

Traineeships

March 2023 – July 2023 **Graduate Trainee**, *Institut d'Astrophysique de Paris*, Paris
Trainee in the "Large-scale structure and distant Universe" group at IAP. Topic: extension of a novel simulation-based inference technique (SELFI) to extract cosmological information from galaxy surveys. Advisors: Florent Leclercq & Guilhem Lavaux

February 2022 – February 2023 **Master thesis**, *ONERA – The French Aerospace Lab*, Châtillon
Research trainee in the NFLU and MSAT teams. I developed analytically a first Vorticity Confinement correction for the direct numerical simulation of Navier-Stokes equations through Discontinuous Galerkin Methods, at arbitrarily high order. Simultaneously, I implemented the method in a massively parallel solver of unsteady compressible turbulent flows. Advisors: Jean-Baptiste Chapelier & Lucas Manueco.

September 2020 – January 2022 **Junior Bioinformatics Scientist**, *Inserm*, Toulouse
In parallel to my Master's degree in Mathematics, I studied statistical learning and heuristic methods to predict enhancer-gene interactions in human genomes based on high-throughput data, towards application to the search of variants involved in haemochromatosis or complex genetic disorders. Advisor: Sarah Djebali.

July 2021 – August 2021 **Research Trainee — Visiting**, *Centre for Genomic Regulation*, Barcelona
Guigó lab. Automated identification and analysis of genetic variants associated with intron retention estimated from RNA-sequencing in blood cell types from the Blueprint Project. Advisor: Diego Garrido.

July 2020 **Research Trainee**, *Toulouse Mathematics Institute*, Toulouse
Theoretical study of the convergence rate of QND measurements w/ Tristan Benoist & Clément Pellegrini.

April 2020 – June 2020 **Research Trainee**, *IRAP – Institut de recherche en astrophysique et planétologie*, Toulouse
Theoretical study of kinetic scale plasma turbulence in the solar wind. Advisor: Philippe Louarn.

June 2019 – August 2019 **Research Trainee**, *Inria, National Institute for Research in Digital Science and Technology*
I analysed the robustness of a deep learning method for real-time biomechanical simulation, with respect to data sparsity and noises, in the context of intraoperative augmented surgery. Advisor: Andréa Mendizabal.

July 2017 **Farm Hand**, *La Ferme aux 100 Blés*, Saint-Broing-les-Moines
Agricultural operation. I used various tools (pneumatic hammer, freight elevators, riveting guns), packed flour and oil, made sourdough bread, ran a market stall and delivered farm products to clients.

Grants

2023 PhD student fellowship "Politique Scientifique" from Sorbonne Université. Value ∼100K€. This program aims to support particularly promising thesis projects, backed by high-quality applications. Only 1 fellowship awarded for Astronomy & Astrophysics in 2023.

2016 – 2020 National scholarship + merit-based grant holder during my undergrad studies (∼ 7k€/year).

Education

2023 – 2026 **Ph.D. Candidate**, *Sorbonne Université (Institut d'Astrophysique de Paris)*, Paris, France
Title: Cosmological physics with Euclid non-standard cosmic web probes.

2020 – 2022 **M.Sc. in Mathematics & M.Sc. in Hybrid AI**, *INSA Toulouse x N7*, Toulouse
This is a transversal curriculum leading to 2 *Diplômes d'ingénieur* (2 distinct MS degrees from French leading *grandes écoles*), built around 3 main axes: numerical mathematical modelling, statistical mathematical modelling, hybrid artificial intelligence. **Humanities are part of the curriculum**. Major scientific topics:

- deterministic and stochastic optimisation, variational data assimilation, optimal control theory
- PDEs, finite volume and Galerkin methods, solving large linear systems, signal / image / wavelets
- advanced statistics, reinforcement learning, advanced and physically constrained machine learning

Master thesis: A Vorticity Confinement correction for the discontinuous Galerkin discretisation of the compressible Navier-Stokes equations.

2019 – 2020 **Academic exchange in Physics**, *Paris-Saclay University*, Gif-sur-Yvette
I took a full year off with respect to my education in Mathematics at INSA Toulouse, in order to develop my knowledge of fundamental physics. I was enrolled in the *Magistère de Physique d'Orsay*, where I studied for one successful semester (hamiltonian mechanics, quantum mechanics, mathematical physics, cosmology, statistical physics, mathematics). I completed my academic year with 2 traineeships in theoretical physics.

2016 – 2019 **B.Sc. in Mathematics**, *INSA Toulouse*, Toulouse
3-year intensive preparatory cycle in fundamental & applied sciences ; very strong emphasis on mathematics. First part of a highly selective public 5-year curriculum leading to a *Diplôme d'ingénieur in Mathematics*.

2016 – 2017 **Propaedeutic year**, *INSA Strasbourg*, Strasbourg, *Top 10%. Transfer to INSA Toulouse.*

2013 – 2016 **High school diploma in sciences**, *Lycée Charles-Emile Freppel*, Obernai, France
Public high school. Highest Honours (18.1/20, top 2% countrywide).

International conferences and summer schools (attendee)

2024 **Euclid summer school**, *cycle 2/3*, Hendaye, 2 weeks

2024 **MaxEnt 2024**, Ghent, Belgium, 1 weeks
43rd International Workshop on Bayesian Inference and Maximum Entropy Methods.

2023 **Future Cosmology**, *IESC*, Cargèse, 1 week

2023 **Euclid summer school**, *cycle 1/3*, Ronces-les-Bains, 2 weeks

Practical skills in Applied Mathematics & in Computer Science

Generalities Signal/image processing, (variational) data assimilation and optimal control, (non-)smooth x stochastic optimisation, inverse problems

Modelling & numerical simulation fluid dynamics, finite volume methods, (discontinuous) Galerkin methods, particle methods (PM, COLA)

Statistics & machine learning (non-)parametric tests, stochastic processes, sampling methods, Bayesian methods, machine learning: kernel methods, neural networks (CNNs, recurrent networks, adversarial networks, PINNs), variational data-assimilation networks, wavelet scattering transforms

HPC solving large x ill-conditioned linear systems, multiprocessing, parallel computing (OpenMP, MPI)

Programming Python, C/C++, Fortran, Julia, R

Misc Git, SLURM, Docker, AWS

Miscellaneous

Hobbies Photography, sport (running, bouldering, hiking).

Referees

Upon request.
